

Press Release

26th May 2006

Incident Response Management Key to Successful Enterprise Security Management

The sheer number of available security solutions would lead one to believe that there is a solution for every security need, and most security management vendors would have you believe that their product is the panacea for managing these requirements. However, technology is not enough; It must be combined with an approach that sensibly connects security solutions to key business imperatives.

Those charged with protecting the enterprise from threats recognise the difficulty of combining technology solutions, and the data they generate, with less tangible elements – such as human interaction, business processes, and accountability – into comprehensive security strategies that measurably reduce risk exposure.

To help security professionals build a comprehensive security management strategy, iSimile has partnered with netForensics Inc. to offer the nFX Open Security Platform (OSP), with Incident Resolution Management, which provides repeatable methodology and expert services that encompass the security life cycle.

“The addition of netForensics and their nFX OSP to our solution portfolio allows us to provide real value to our customers” said Leigh Collett, Managing Director, iSimile Limited. “A key issue in the large organisations that we work with is providing a cost effective, skilled 24 x 7 security operations centre. The Incident Resolution Management of nFX OSP allows repeatable workflow to be defined, which in conjunction with a powerful knowledge base, allows first line support of security incidents to be managed in the Network Operations Centre (NOC). Most enterprise NOCs have already developed a 24 x 7 operation, which reduces costs and frees up Security Analysts time to deal with the real security issues.”

“netForensics are delighted to be partnering with iSimile,” said Simon Lowery, Director of Business Development EMEA for netForensics. “What we liked about iSimile was the depth of their experience in this rapidly expanding market. netForensics have a very focused partner programme we spent a lot of time evaluating potential partners in the UK and iSimile have the focus, expertise and knowledge to help us achieve our growth.”

About iSimile Limited

iSimile deploys Business Assurance solutions into large enterprise and service provider organisations that effectively manage the performance, availability and security of their applications, systems and infrastructure.

iSimile is a privately held Company incorporated in December 2002, that designs, implements, and supports a range of business-focused solutions that include:

iSimile

- Business service management
- Application performance management
- Network health management
- System & application management
- Security risk management
- Event consolidation and correlation
- IT security surveillance and packet-level forensics
- Vulnerability management
- Intrusion detection
- Dynamic intrusion prevention
- Security intelligence reporting
- Incident Management

iSimile's solutions are based on best-of-breed products from Concord, Crannog Software, netForensics, nCircle, Niksun and Q1 Labs and are implemented to meet the challenges of maintaining business continuity and providing the productivity, performance and protection that large organisations require from their IT investments and resources.

iSimile offers a full range of professional services in support of its product portfolio. Assessment, installation and customisation are provided to ensure ease of implementation and a number of comprehensive training courses are available designed to meet the needs of both administrators and analysts.
